FULL-STACK SOFTWARE ENGINEER | AI-POWERED PLATFORMS & PRODUCT ENGINEERING

IMPACT SNAPSHOT: 75,000+ Product Records Synchronized — 120,000+ Media Assets Migrated to Cloud — \$150K Modernization Initiative Delivered

- Full-stack engineer and designer with roughly 2.5 years of professional engineering experience built on a decade-long background in design, print production, and media, currently founding and architecting a production AI-powered CRM and event-operations platform end to end.
- Owns projects from architecture and database design through third-party integrations, UI, deployment, and direct client communication, with production experience wiring payment, shipping, email, and AI systems into working systems (Stripe, Shippo, Klaviyo, Eventbrite, OpenAI).
- Brings a dual design-and-engineering lens to every build, pairing production-grade backend and integration work with an eye for interface clarity and end-user experience.

TECHNICAL SKILLS

Languages & Frontend: JavaScript, TypeScript, PHP, HTML, CSS, React, Vite, React Router, Axios
Backend & Databases: Node.js, Express, MongoDB, SQL, PostgreSQL, Supabase, REST APIs, JWT Authentication, Joi
Cloud, DevOps & Deployment: AWS, Google Cloud Platform, Render, Vercel, Ubuntu, Virtual Machines, CI/CD
Testing, Security & Practices: Jest, Supertest, Winston, Morgan, Helmet, CORS, Rate Limiting, Agile, Git/GitHub
Design & Media Production: Adobe Illustrator, Photoshop, InDesign, XD, Dreamweaver, Lightroom, Premiere Pro, WordPress

CAREER HIGHLIGHTS

Platform Architecture	Systems Integration	Data Infrastructure
Architected and built a full-stack AI-powered event-marketing platform from scratch unifying CRM, five-workspace prospect discovery, campaign planning, outreach, and Eventbrite ticketing into one operational data layer.	Integrated Eventbrite (OAuth, webhooks, ticketing, affiliate tracking) alongside Emailable, Resend, OpenAI, Gmail, and Monday.com, plus Stripe, Shippo, and Klaviyo across client e-commerce builds.	Designed backend APIs syncing Microsoft Dynamics ERP with SQL databases across 75,000+ products, and migrated 120,000+ product images to cloud infrastructure supporting a \$150K platform modernization.

PROFESSIONAL EXPERIENCE

AI GROWTH OPERATOR – Remote

Jul 2026 – Present

Founder & Technical Lead

Own the full architecture of a production AI-powered event-marketing operations platform, from data model through deployment, leading planning for a future multi-tenant version.

- Architected and built a full-stack AI-powered event-marketing operations platform (**React 19/Vite frontend, Node/Express/MongoDB backend**) unifying contact management, prospect discovery, campaign planning, outreach, and Eventbrite ticketing in a single workspace
- Built a **five-workspace prospect research system** (Company Discovery, Intent Monitoring, Live Leads, People Research, Saved Searches) backed by a database-leased background worker for continuous, restart-safe intent monitoring
- Designed a built-in CRM pipeline (Needs Attention → Ready to Assign → Campaign Assigned → Archived) with email-verification safeguards to keep outreach compliant and deliverable

- Integrated **Eventbrite** (OAuth, webhook sync, ticketing, affiliate/commission tracking), **Emailable**, **Resend**, **OpenAI**, **Gmail**, and **Monday.com** into one operational data layer
- Built "Jarvis," an in-app AI assistant with synchronized Obsidian memory, giving the team natural-language access to workspace status, campaign priorities, and next actions
- Implemented role-based access control (owner/admin/member/viewer), server-side sessions, and CSRF protection across the platform

FREELANCE SOFTWARE ENGINEER & DESIGNER – Self-Employed, Remote
2019 – Present

Take on freelance web design, development, and branding projects for small businesses and individual clients alongside full-time and contract roles.

- Designed, built, and deployed full production websites end-to-end, including **Terry's Auto Service Platform** (terrysauto.shop) and **Sparkle Bows** (sparklebows.shop)
- Managed the entire client relationship — proposals, design, development, deployment, and support — sourcing clients through referrals and direct outreach
- Integrated Stripe, Shippo, Klaviyo, and Cloudinary across client e-commerce builds, and hardened APIs with Helmet, CORS, rate limiting, and JWT authentication

SABI VENTURES – Remote
Jan 2026 – Feb 2026

Software Engineer, Contract

Designed and built a production Chrome extension from architecture through Chrome Web Store submission.

- Designed and built "Standing Break Reminder," a **Chrome extension (Manifest V3)** that prompts users to take movement breaks at fully customizable intervals from 10 to 180 minutes
- Built the React 18 popup interface and Webpack 5 build pipeline, and implemented the Chrome Alarms API to drive persistent, accurate interval timers that keep running after the popup is closed
- Used the Chrome Notifications API and Chrome Offscreen API to deliver combined visual/audio break alerts, with an auto-restart flow once a break is acknowledged

TRIPLETEN – Remote
Apr 2025 – Jan 2026

Software Engineer

Completed an intensive full-stack software engineering program, building production-style applications and leading a capstone team.

- Built **6+ full-stack applications** using React, Node.js, Express, MongoDB, SQL, and REST APIs, including e-commerce platforms, SaaS applications, and business management systems
- Led the BudgetBlox capstone team — 2 software engineers and 2 data science students — end-to-end, coordinating GitHub workflows, task delegation, and delivery against deadlines
- Designed and implemented secure RESTful APIs, authentication workflows, and database integrations while collaborating in Agile team environments

SURPLUS SALES OF NEBRASKA – Fort Calhoun, NE
Feb 2023 – Jul 2024

Full-Stack Developer

Inherited a fully static company site with no CMS and no database integration, and led a complete infrastructure overhaul that remains in production.

- Designed and implemented backend APIs integrating Microsoft Dynamics ERP, SQL databases, and the e-commerce platform to automate inventory synchronization across **75,000+ products**, replacing a fully manual workflow and supporting a **\$150K platform modernization initiative**
- Optimized and completed the SQL database for 75,000+ product records by defining missing fields and IDs, improving data accuracy and enabling scalability across the platform
- Migrated **120,000+ product images** from Linux servers to DigitalOcean cloud infrastructure, improving system performance and reliability while eliminating manual asset management workflows

EDUCATION & CERTIFICATIONS

Software Engineering Certificate — TripleTen | Apr 2025 – Jan 2026

Bachelor of Web Design — Miami International University of Art & Design | Mar 2020 – Jun 2024

Associate of Arts and Science — Independence University | Aug 2016 – Oct 2018

Foundational C# (in progress) — Microsoft / freeCodeCamp
