

CASSANDRA PETERSON

Full-Stack Software Engineer & Designer | Sacramento, CA | 402-320-7567 | cpeterson.dev@gmail.com
github.com/cpeterson27 | cpeterson27.github.io/portfolio | linkedin.com/in/cassandrapeterson-software-engineer
Design Portfolio: cgdesigns93.wixsite.com/cassandra-peterson

SUMMARY

Full-stack software engineer and designer with roughly 2.5 years of professional engineering experience built on a decade-long background in design, print production, and media. Owns projects end to end — architecture, database design, third-party integrations, UI, deployment, and client communication. Core stack is React, Node/Express, and MongoDB/SQL, with production experience integrating payment, shipping, email, and AI systems (Stripe, Shippo, Klaviyo, Eventbrite, OpenAI). Currently founding engineer on a production AI-powered CRM/event-operations platform, with an ongoing freelance practice alongside it.

SKILLS

Languages & Frontend: JavaScript • TypeScript • PHP • HTML • CSS • React • Vite • React Router • Axios

Backend & Databases: Node.js • Express • MongoDB • SQL • PostgreSQL • Supabase • REST APIs • JWT Authentication • Joi

Cloud, DevOps & Deployment: AWS • Google Cloud Platform • Render • Vercel • Ubuntu • Virtual Machines • CI/CD

Testing, Security & Practices: Jest • Supertest • Winston • Morgan • Helmet • CORS • Rate Limiting • Agile • Version Control • Github

Design & Media Production: Adobe Illustrator • Photoshop • InDesign • XD • Dreamweaver • Lightroom • Premiere Pro • WordPress

EXPERIENCE

Founder & Technical Lead - AI Growth Operator

Remote | Jul 2026 - Present

- Architected and built a full-stack AI-powered event-marketing operations platform (React 19/Vite frontend, Node/Express/MongoDB backend) that unifies contact management, prospect discovery, campaign planning, outreach, and Eventbrite ticketing in a single workspace
- Built a five-workspace prospect research system (Company Discovery, Intent Monitoring, Live Leads, People Research, Saved Searches) backed by a database-leased background worker for continuous, restart-safe intent monitoring
- Designed a built-in CRM pipeline (Needs Attention → Ready to Assign → Campaign Assigned → Archived) with email-verification safeguards to keep outreach compliant and deliverable
- Integrated Eventbrite (OAuth, webhook sync, ticketing, and affiliate/commission tracking), Emailable, Resend, OpenAI, Gmail, and Monday.com into one operational data layer
- Built "Jarvis," an in-app AI assistant with synchronized Obsidian memory, giving the team natural-language access to workspace status, campaign priorities, and next actions
- Implemented role-based access control (owner/admin/member/viewer), server-side sessions, and CSRF protection, and led architecture planning for a future multi-tenant version of the product

Freelance Software Engineer & Designer - Self-Employed

Remote / 2019 - Present

- Took on freelance web design, development, and branding projects for small businesses and individual clients between full-time and contract roles, keeping skills current and building a diverse project portfolio
- Designed, built, and deployed full production websites end-to-end, including Terry's Auto Service Platform (terrysauto.shop) and Sparkle Bows (sparklebows.shop)
- Managed the entire client relationship — proposals, design, development, deployment, and support — sourcing clients through referrals and direct outreach

Software Engineer, Contract - Sabi Ventures

Remote | Jan 2026 - Feb 2026

- Designed and built "Standing Break Reminder," a Chrome extension (Manifest V3) that prompts users to take movement breaks at fully customizable intervals from 10 to 180 minutes
- Built the React 18 popup interface and Webpack 5 build pipeline, and implemented the Chrome Alarms API to drive persistent, accurate interval timers that keep running even after the popup is closed
- Used the Chrome Notifications API and Chrome Offscreen API to deliver combined visual and audio break alerts, and built an auto-restart flow so a new timer begins automatically once a break is acknowledged
- Designed a clean, Apple-inspired interface end-to-end and packaged the production build for Chrome Web Store submission

Software Engineer - TripleTen

Remote | Apr 2025 - Jan 2026

- Built 6+ full-stack applications using React, Node.js, Express, MongoDB, SQL, and REST APIs, including e-commerce platforms, SaaS applications, and business management systems
- Led the BudgetBlox capstone team - 2 software engineers and 2 data science students - end-to-end, coordinating GitHub workflows, task delegation, and delivery against deadlines
- Learned and applied Ubuntu and virtual machine environments alongside core software engineering practices, strengthening the Linux and deployment fundamentals used in later projects
- Designed and implemented secure RESTful APIs, authentication workflows, and database integrations while collaborating in Agile team environments using Git and GitHub

- Inherited a static company website with no CMS integration; when the system was not yet fully configured, manually coded new product listings directly into the site's saved files and manually entered matching records into the SQL database to get products live
- Designed and implemented backend APIs integrating Microsoft Dynamics ERP, SQL databases, and the e-commerce platform to automate inventory synchronization across 75,000+ products, replacing the manual workflow and supporting a \$150K platform modernization initiative
- Optimized and completed the SQL database for 75,000+ product records by defining missing fields and IDs, improving data accuracy and enabling scalability across the platform
- Migrated 120,000+ product images from Linux servers to DigitalOcean cloud infrastructure, improving system performance and reliability while eliminating manual asset management workflows

FEATURED PROJECTS

Sparkle Bows

Live demo: sparklebows.shop | GitHub: <https://github.com/cpeterson27/sparkle-bows>

- Full-stack ecommerce application for boutique hair accessories — a React 19 storefront and a Node/Express API handling authentication, catalog, checkout, orders, reviews, and shipping.
- Integrated Stripe for payments, tax calculation, and webhook-driven order fulfillment, and Shippo for shipping label purchase and management
 - Built JWT authentication with refresh tokens, and hardened the API with Helmet, CORS, express-rate-limit, and express-mongo-sanitize
 - Used Cloudinary for media hosting, Resend/Nodemailer/SendGrid-compatible workflows for transactional email, and Klaviyo for marketing capture
 - Wrote Jest/Supertest backend test coverage and containerized the API with Docker for deployment

Terry's Auto Service Platform

Live demo: terrysauto.shop | GitHub: <https://github.com/cpeterson27/terrys-auto-service>

- Business website, customer portal, and admin dashboard for a local auto shop, built with a React 18/TypeScript/Vite frontend and a Node/Express/TypeScript API.
- Built customer signup/login with email verification and password reset, plus a self-service portal for booking, rescheduling, and canceling appointments
 - Built an admin dashboard for invoices, expenses, customers, and messages, including a Cloudinary-powered gallery manager supporting multiple media files per entry
 - Integrated Resend for transactional email (verification, password reset, booking, and admin notifications) and Klaviyo for opt-in marketing capture
 - Deployed the frontend on Vercel and the API on a Render-compatible Node server, with smoke-test and Cloudinary-credential-check scripts for deployment verification

BudgetBlox

Live demo: budgetblox-rxr8z03sm-cassies-projects-67fd5d41.vercel.app/ | [Github.com/cpeterson27/budgetblox](https://github.com/cpeterson27/budgetblox)

- Full-stack personal finance application (TripleTen capstone) for tracking expenses, managing budgets, and visualizing spending habits.
- Led a team of 2 software engineers and 2 data science students from planning through delivery, coordinating GitHub workflows and integration points between the two disciplines
 - Integrated a Python-based spending-analysis script from the data science team into the application's benchmarking and overspending-alert features
 - Built JWT authentication, an Express/MongoDB backend, and a React/Vite frontend with interactive charts for spending visualization
 - Deployed both frontend and backend on Vercel

EDUCATION & CERTIFICATIONS

Software Engineering Certificate - TripleTen	Apr 2025 - Jan 2026
Bachelor of Web Design - Miami International University of Art & Design	Mar 2020 - Jun 2024
Associate of Arts and Science - Independence University	Aug 2016 - Oct 2018
Foundational C# (in progress) - Microsoft / freeCodeCamp
