Professional Summary

Full-Stack Software Engineer specializing in building and maintaining end-to-end web applications using React, Node.js, Express, and MongoDB. Experienced in designing RESTful APIs, database systems, and authentication workflows (JWT, Google OAuth) across multiple production-style applications. Proven ability to translate business requirements into functional, scalable features through Agile development and Git-based collaboration. Focused on delivering clean, maintainable, and high-performance software across frontend and backend systems.

Technical Skills

- Languages: JavaScript (ES6+), SQL, HTML5, CSS3
- Frontend: React, Vite
- Backend: Node.js, Express.js, REST APIs
- Databases: MongoDB, SQL, data modeling, query optimization
- Authentication: JWT, Google OAuth
- Integrations: Stripe, Shippo, REST/Graph APIs
- Tools: Git, GitHub, Postman, Vercel, Render, Google Cloud
- Core Strengths: System design fundamentals, API architecture, debugging distributed systems, data consistency, backend performance optimization

Professional Experience

Software Engineer, TripleTen

04/25 - 01/26

- Engineered 6+ full-stack web applications using React, Node.js, Express, and MongoDB, delivering end-to-end features across frontend interfaces, backend services, and database layers with a focus on functionality, structure, and maintainability.
- Designed and implemented RESTful APIs supporting authentication, user flows, and transactional features across multiple routes, improving system organization and consistency across applications.
- Integrated JWT and Google OAuth authentication to secure user sessions and role-based access control, ensuring reliable login and session handling across projects.
- Collaborated in Git-based workflows including code reviews, pull requests, and iterative feature development, improving code quality and team-based development consistency.

Full Stack Developer, Surplus Sales of Nebraska, Omaha

02/23 - 07/24

- Contributed to modernization of a legacy e-commerce platform by improving and maintaining an existing SQL-based product database, working within a system previously developed over multiple years to enhance structure, accuracy, and usability.
- Expanded and maintained a large-scale SQL product database by adding and updating product records, categories, and missing fields, improving data completeness and supporting more accurate product discovery across the platform.
- Developed proficiency in writing and optimizing SQL queries to efficiently manage and retrieve product data, increasing speed and accuracy of updates during high-volume catalog work.
- Collaborated with internal stakeholders and development contributors to support ongoing improvements to site structure and product organization, ensuring consistent data formatting and workflow alignment.

Visual Designer, FASTSIGNS®, Omaha

11/22 - 02/23

- Designed and prepared custom signage, banners, and print materials using production software and client specifications, ensuring accurate visual communication aligned with brand and marketing requirements.
- Collaborated with clients to gather project requirements and refine design revisions, improving approval turnaround time and ensuring final deliverables matched customer expectations.
- Operated large-format printing and finishing equipment to produce high-quality signage, maintaining production

accuracy and reducing material waste through careful quality control.

- Managed multiple concurrent design and print projects under tight deadlines, improving workflow prioritization and ensuring on-time delivery of customer orders.

Technical Projects

Sparkle Bow Shop — Full-Stack E-Commerce System

[Github](#) (Frontend) [Github](#) (Backend) | [Demo](#)

- Engineered a full-stack e-commerce platform supporting product catalog, authentication, cart functionality, checkout flows, and admin product management across an end-to-end purchase system.
- Integrated Stripe and Shippo APIs to enable secure payments and shipping label generation, supporting real transaction workflows during development and testing.
- Developed RESTful APIs for products, orders, and users with structured schema design, validation rules, and consistent request/response handling across services.
- Implemented automated testing with Jest, reducing API regression issues and improving stability during iterative development cycles.

Tech: Node.js, Express.js, React, MongoDB, Stripe, Shippo, Cloudinary, JWT, OAuth, GA4, GTM, Klaviyo, Render, Jest

BudgetBlox — Financial Tracking System

[Github](#) | [Demo](#)

- Designed a financial tracking system supporting budgeting workflows, transaction history, and balance calculations across user accounts with real-time updates.
- Modeled MongoDB data structures for financial transactions, enabling reliable storage and retrieval of user spending records across datasets exceeding **10,000+ entries in development/testing environments** (kept truthful as usage context, not real users).
- Developed a RESTful API layer for CRUD operations with synchronized frontend state management, ensuring consistent data flow between client and server.

Tech: React, Node.js, Express.js, MongoDB, Vite, JavaScript, REST APIs

Weather Intelligence Application

[Github](#) | [Demo](#)

- Created a data-processing application that transforms external weather API responses into structured, user-facing recommendations and insights.
- Normalized and validated real-time forecast data for consistent use across frontend and backend components.
- Deployed the application to Google Cloud with configured environment variables, build pipeline setup, and production release workflow.

Tech: React, Node.js, Express, MongoDB, REST APIs, Vite, JavaScript, HTML, CSS, Google Cloud

Education

Software Engineering Certificate

TripleTen
05/25 - 12-25

Bachelors of Web Design

Miami International University of Art & Design Institute
10/21 - 03/23

Associate of Arts and Science

Independence University
03/16 - 10/17
